Are you still waiting for the UN to fix climate change? You can do this today

N0CO2 is new campaign that puts the power to stop climate change into the hands of everyone.

Sir David Attenborough spoke at COP24 on 5 December about the terrible consequences if we fail to take action on climate change. Despite 24 years of talks, [CO2 emissions are projected to increase by between 1.8% and 3.7% in 2017-18.](#)

Most people are still waiting for Governments or the UN to take action, or for the USA and China to come to an agreement about climate change.

We are ALL creating CO2, which is damaging our planet. Now we can do something about it.

N0CO2 is what it says. It's No CO2. You personally go Carbon Neutral - by removing YOUR CO2 footprint.

N0CO2 implements a proven solution to climate change. Planting trees removes CO2 - so we plant trees.

What's new? If you plant enough trees, you can you remove ALL your own CO2. See [N0CO2](#)

7 Tonnes of CO2 per person per annum is the average created by each person living in the UK or the EU. 1,750 trees on average will remove 7 Tonnes of CO2 for EVERY year the trees are growing. **N0CO2** will plant 1,750 trees for you for just £187.

In the USA and Canada CO2 emissions are 16 Tonnes of CO2 per person per annum. **N0CO2** will plant 4,000 trees which on average will remove 16 Tonnes EVERY year for £427.

NOTES TO EDITORS

- **N0CO2** is a global campaign by the international NGO Saving Our Planet, which is registered in France as a public interest non-profit, under Association Loi 1901, Registration Number W751235109. <http://www.savingourplanet.net>

- **N0CO₂** plants trees in Madagascar, Indonesia and Nepal.
- 500 million hectares of formerly forested land could be re-forested and this could remove around 3.6 billion tonnes of CO₂ per annum. Source: [Woods Hole Research Centre](#). We estimate these 500m hectares should be sufficient to remove the UK and EU average emissions of around 7 Tonnes of CO₂ per person PER YEAR from around 500m people.
- On 8 October 2018, the UN IPCC Intergovernmental Panel on Climate Change issued a stark warning that global warming must be kept to a maximum of 1.5C. Without urgent action there is a high risk of extreme heat, drought, fires and floods, leading to crop failure, sea level rise and poverty for hundreds of millions of people. The IPCC said that to keep global warming to a maximum of 1.5C, the world needs to achieve Net-Zero CO₂ emissions by 2050.
- Global warming is heading for 3.5C according to President Macron speaking in December 2017. This is despite World Leaders committing the agreement to keep global warming “well below 2C” and “to pursue efforts” to limit global warming to 1.5C.
- **N0CO₂** is a volunteer managed non-profit organisation. We set up **N0CO₂** because we felt we must do something to stop climate change from wrecking our planet and all our futures. See www.n0co2.org
- The name **N0CO₂** comes from Net-zero CO₂, which is the critical milestone where our CO₂ emissions have been so reduced they can ALL be removed by natural processes of trees, soil and the oceans.
- Do you create much more CO₂ than these averages of 7 Tonnes or 167 Tonnes of CO₂ per person per annum. Then multiply these averages x1.5, x2 or more. And think about donating for the rest of your family too.

END
